This section covers installation of the wheel arch trim set.

Note:
Before performing installation, be sure to read this Manual. Perform installation properly in accordance with the instructions.

CAUTION
Please refer to the precautions below before beginning work, in order to install this product safely and accurately. Please also refer to the vehicle Service Manual.
- During installation, take care not to scratch the car body with tools, etc.
- Before starting installation, switch the engine OFF and ensure the parking brake is set.
- If the outdoor temperature is 15°C / 59°F or lower, use a dryer to warm the product and the double-sided tape affixing surface on the car body to between 16°C / 61°F and 43°C / 109°F. However, avoid using an industrial drier for this purpose.
- The double-sided tape will stick only if pressed. Also, the adhesiveness of the tape will decrease markedly if it is removed and affixed again. To avoid having to reposition the tape, affix it after determining its proper position. Never leave the double sided tape uncovered for an extended length of time.
- Once affixed, the double-sided tape gradually increases in adhesiveness.
- Avoid washing the car for 24 hours after installing the product.
- When the car must be washed or waxed on the same day that installation was performed, wait for at least one hour before beginning, and use tape or other material to cover the areas where double-sided tape is affixed, to prevent contact with water.
- Also take care to not place unreasonable force on installed parts.
- When performing air blowing after installing the product, keep the blower exhaust opening to at least 300 mm (12 in.) away from the parts. Moving the blower too close may cause parts to detach.
- During installation, take care to avoid breakage or warping of car body parts. Refer to your car’s service manual regarding installation procedures for car body parts.
- This manual covers both right- and left-side installation. Confirm the shape of parts to be installed when proceeding.
- Requires splash guards for proper fit.
- This product will not fit vehicles with door edge guards installed.

Preparations
For safe and proper installation, park the vehicle in a flat location and set the parking brake.

Use a neutral detergent (or alcohol wipes) and shop cloth to wipe the wheel arch trim installation surfaces of the vehicle body free of dirt, and let the surfaces dry thoroughly.

Use a shop cloth to clean off any sand or mud on the bumper and fender flanges as well.

#### RH or Passenger Side

- (1) Arch trim F bumper RH
- (2) Arch trim F bumper LH
- (3) Arch trim F fender RH
- (4) Arch trim F fender LH
- (5) Arch trim R door RH
- (6) Arch trim R door LH
- (7) Arch trim R fender RH

#### LH or Driver’s Side

- (8) Arch trim R fender LH
- (9) Arch trim R fender RH
- (10) Arch trim R bumper LH
- (11) Metal clips (short)
- (12) Metal clips (long)
- (13) Protective tape (24-piece sheet)
- (14) Alcohol Wipes

### Required tools

Shop cloth, neutral detergent, (or cleaning agent), masking tape, water-based marker.

### Figure illustrating completed installation

- (4) Arch trim F fender LH
- (6) Arch trim R fender LH
- (8) Arch trim R fender LH
Front end installation procedures
This figure depicts installation on the LH (Driver’s) side.

1. Place the wheel arch trim (2) and (4) against the installation position, and hold it in place temporarily with masking tape. Figure 1

2. Using the holes for the metal clips and the shape of the seating face as guides, make markings with the water based-marker. (3 locations of the F fender flange, 2 locations for F bumper) Figure 1

3. Remove the wheel arch trim and, using the markings as guides, affix the protective tape (13). The protective tape (13) is provided as a 24-piece sheet. Peel off and use one piece at a time.

4. Place wheel arch trim (2) and (4) against the installation location again and confirm that the hole configuration of the seating face and the tape affixing positions match.

NOTE:
- When affixing the protective tape to the F fender, be sure to wrap the tape around to the back side of the sheet metal.

- If the tape is difficult to affix, gently push up on the mud guard on the car body. Do not push any more than necessary.
- Check with your car's service manual for details on handling car body parts.

5. On the backside of wheel arch trim (2) remove side tape liner. Peel back 1" of tape liner from top of wheel arch trim (2). Figure 2
6. Temporarily affix the wheel arch trim (2) to the car body using light pressure on exposed tape. Figure 3

7. Grasp exposed end of tape liner and pull to remove. Figure 4

8. Apply pressure along area where tape is located. See dotted lines Figure 5

9. Reach inside of the fender splash shield to gain access to the back side of the bumper cover. At the lower section of the bumper, squeeze the wheel arch molding (WAM) and bumper cover together to ensure complete tape "wet out" adhesion at the lower section of the bumper. Figure 6

**NOTE:**
- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.

* The values for the gaps are design values.
10. On the backside of wheel arch trim (4) remove bottom and side tape liners. Peel back 1" of tape liner from top of wheel arch trim (4). Figure 7

![Diagram of Peel back 1" of top tape liner](image)

11. Temporarily affix the wheel arch trim (4) to the car body using light pressure on exposed tape. Figure 8

![Diagram of Wheel arch trim (4) Temporarily Affixed](image)

12. Grasp exposed end of tape liner and pull to remove. Figure 9

![Diagram of Exposed end of tape liner](image)

13. Apply pressure throughout the center of the part and area where tape is located. Press up on the center of the part for proper tape "wet out". See dotted lines Figure 10.

![Diagram of 15 lbs. 3X](image)

**NOTE:**
- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.

![Diagram of Wheel Body Gap](image)

* The values for the gaps are design values.
Rear end installation procedures

This figure depicts installation on the LH (Driver’s) side.

1. Press the wheel arch trim (6), (8), and (10) to the installation position, and hold it in place temporarily with masking tape. Figure 6

2. Using the holes for installation and the shape of the seating face as guides, make markings with the water-based marker. (2 locations on the car body R fender flange, 2 locations on the car body R door inside) Figure 12

3. Remove the wheel arch trim and, using the markings as guides, affix the protective tape (13). The protective tape (13) is provided as a 24-piece sheet. Peel off and use one piece at a time.

4. Place the wheel arch trim (6), (8), and (10) against the installation location again, and confirm that the hole configuration of the seating face and the tape affixing positions match.
NOTE:
- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.
- After installing the wheel arch trim (6) for the R door, open and close the door to confirm that there is no interference between parts.
- Confirm that the divider alignment between the wheel arch trim R door (6) and the wheel arch trim R fender (8) is as shown in the figure below.

NOTE:
- The values for the gaps are design values.

6. Temporarily affix the wheel arch trim (6) to the car body using light pressure on exposed tape. Figure 14

5. On the backside of wheel arch trim (6) remove bottom and side tape liners. Peel back 1" of tape liner from top of wheel arch trim (6). Figure 13

NOTE:
- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.
- After installing the wheel arch trim (6) for the R door, open and close the door to confirm that there is no interference between parts.
- Confirm that the divider alignment between the wheel arch trim R door (6) and the wheel arch trim R fender (8) is as shown in the figure below.

NOTE:
- The values for the gaps are design values.
7. Align rear door wheel arch molding to rear door edge of vehicle, the (2) inner locator tabs on the wheel arch molding should rest against the bottom edge of the rear door as shown below. Figure 15

8. Grasp exposed end of tape liner and pull to remove. Figure 16

9. Apply pressure along area where tape is located. See dotted lines Figure 17.

10. On the backside of wheel arch trim (8) remove side tape liners. Peel back 1” of tape liner from top of wheel arch trim (8). Figure 18
11. Temporarily affix the wheel arch trim (8) to the car body using light pressure on exposed tape. Figure 19

![Figure 19](image)

**NOTE:**
- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.
- After installing the wheel arch trim (6) for the R door, open and close the door to confirm that there is no interference between parts.
- Confirm that the divider alignment between the wheel arch trim R door (6) and the wheel arch trim R fender (8) is as shown in the figure below.

![Alignment standard for (6)](image)

Carefully install the trim end so it does not protrude from the car body part.

- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.

![Alignment standard for (8)](image)

12. Grasp exposed end of tape liner and pull to remove. Figure 20

![Exposed end of tape liner](image)

13. Apply pressure along area where tape is located. See dotted lines Figure 21.

![Apply pressure](image)

14. On the backside of wheel arch trim (10) remove side tape liners. Peel back 1” of tape liner from top of wheel arch trim (10). Figure 22

![Peel back 1” of tape liner](image)

* The values for the gaps are design values.
15. Temporarily affix the wheel arch trim (10) to the car body using light pressure on exposed tape. Figure 23

NOTE:
- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.
- After installing the wheel arch trim (6) for the R door, open and close the door to confirm that there is no interference between parts.
- Confirm that the divider alignment between the wheel arch trim R door (6) and the wheel arch trim R fender (8) is as shown in the figure below.

Carefully install the trim end so it does not protrude from the car body part.

- When temporarily affixing the parts, align the gaps in the trim divider parts to the gaps in the car body parts to prevent misalignment of the wheel arch trim exterior.

* The values for the gaps are design values.

16. Grasp exposed end of tape liner and pull to remove. Figure 24

17. Apply pressure along area where tape is located. See dotted lines Figure 25

* The values for the gaps are design values.
18. Attach the metal clips. Figure 26

19. After the procedure is complete, wipe off any dirt on the outer surface using a shop cloth or alcohol wipes. Install the product on the RH side in the same way. The above completes the procedure for the rear end.

NOTE:
- Insert the metal clips until the tabs catch, and confirm that the clips do not rattle.
- Take care with the shape of the metal clips and the part in use.
