General Service Bulletin (GSB):	"Wiring Repair"		
GSB Overview:	This GSB covers what is available for proper wiring repairs, how to order wire terminals, pigtails, connectors and tools, along with proper procedures to make wiring repairs.		
NOTE: This information is not intended to replace or supersede any warranty, parts and service policy, Work Shop Manual (WSM) procedures or technical training or wiring diagram information.			

Contents:

1. What is Available for Wiring Repair

- Connector Pigtail Kits
- Terminal Repair Kits
- Splice Kits (including Heat Shrink Tubing)
- Correct Soldering and Crimping Procedures

2. How to Order

- Connector Pigtail Kits and Terminal Repair Kits
- Splicing and Crimping materials
- Correct tools for wiring diagnosis and repairs

3. Repair Processes and Information

• Overlay Wire/Circuits

Wiring Diagram – Cell 5 and Cell 150

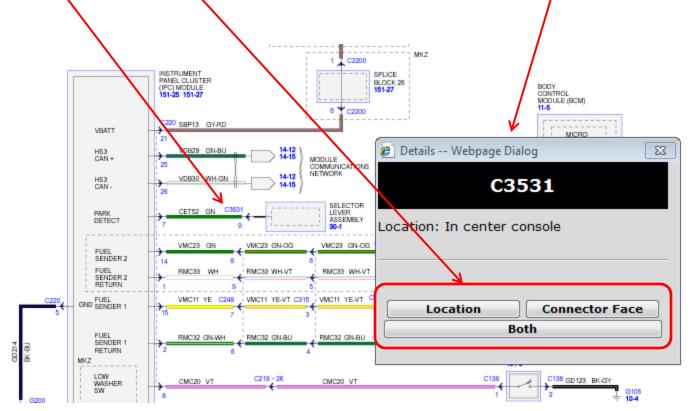

- Cell 5 Contains information on wiring circuit inspection and testing
- **Cell 150** Contains connector views. You can also access the connector view and location while in a wiring cell by placing your mouse over the connector number you wish to view and left click.
- Cell 151 Contains connector locations

NOTE: Items on the following pages only show up in the wiring diagram if a VIN was used during Vehicle ID in PTS

Connector Information

When you click on the connector number you would like to view, a pop up box will appear which allows you to view the connector location, connector face, or both.

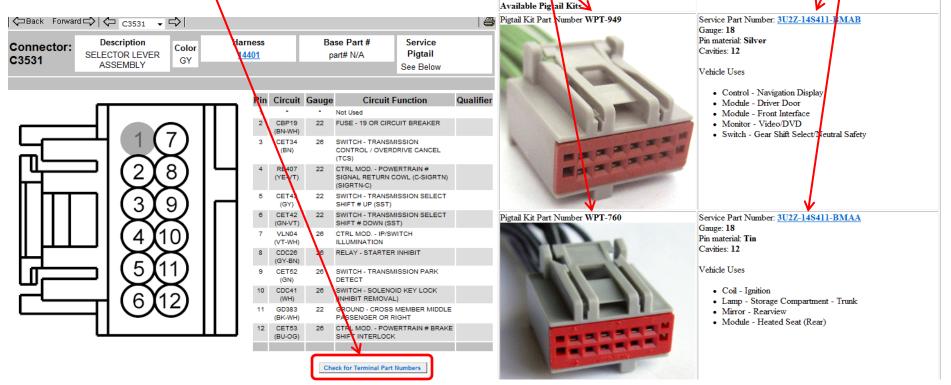

Location

The Location tab will show you this page with the connector you are looking for, most times it will be highlighted in red

Connector Face

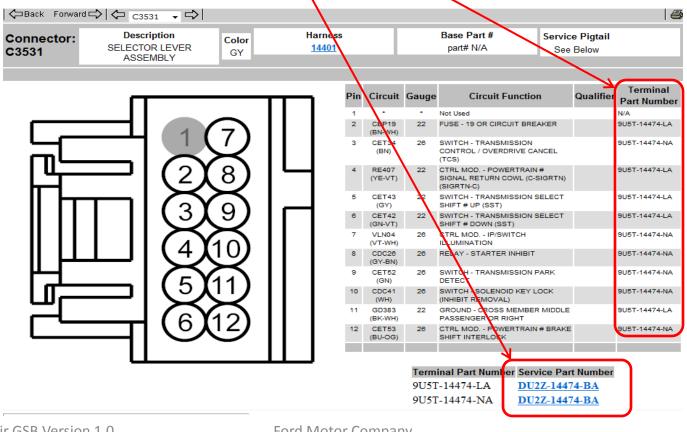

The Connector Face tab will give you a view of the connector face with the option to Check for Terminal Part Numbers (if available). Along with the Pigtail Kit part numbers in blue (if available). Motorcraft Pigtail Part Numbers are in black (if available). **NOTE:** VIN must be used to see these part numbers

NOTE: Match the orientation of the keyway and the gauge of the wire to order the correct connector

Check for Terminal Kit Part Numbers

When you click on Check for Terminal Part Numbers (if available) the terminal part numbers will be displayed in the Terminal Part Number column and the corresponding Service Part Number will be shown in blue at the bottom right of the chart. **NOTE:** VIN must be used to see these part numbers

Clicking on the blue part number from the **Connector Face** page (pg. 5) will open the Catalog Advantage page (shown below) where you can click on the part number you want in the Search Results tab. This will open the Physical Part Content Page (shown on page 8).

Shown below is the contents of a Terminal Kit. It contains enough components to repair 5 terminals.

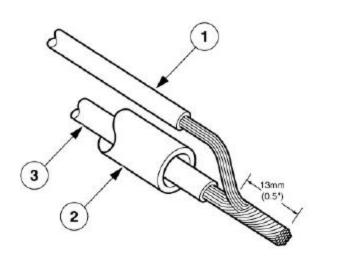

### Solder/Heat Shrink Wire Repair

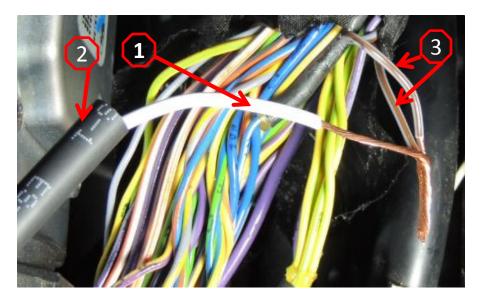

- 1. Strip insulation off of wire (#1) 1 ½ inches
- 2. Strip insulation off of wire (#2) ³/₄ inch (picture on right shows 2 wires being spliced)

### Solder/Heat Shrink Wire Repair

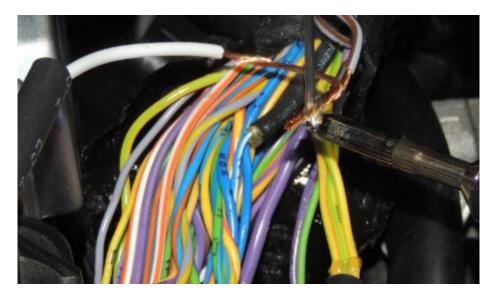

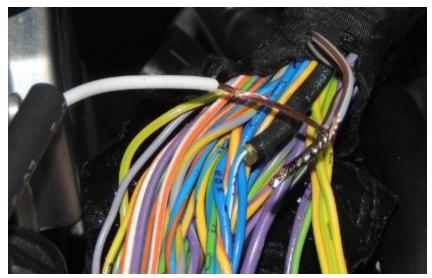

- 1. Install the heat shrink tubing (#2)
- 2. Twist approximately ½ inch of the wires together (#1 & #3)
- 3. Solder the wires together (see page 13)

**Note:** The soldering procedure shown in Cell 5 (page 6) of the Wiring Diagram is also acceptable

### Solder/Heat Shrink Wire Repair

#### **Proper Soldering Process**

**Proper Solder Joint** 

 Place Rotunda Soldering Gun WELD550PK (or equivalent) under twisted wires until wires are hot enough to melt solder
 NOTICE: Do not everybeat wire or damage to insulation may essure

NOTICE: Do not overheat wire or damage to insulation may occur

• Feed solder into wires from the top

**NOTE:** Use rosin core mildly activated (RMA) solder. Do not use acid core solder **NOTE:** Do not drip melted solder on to the wires, as this will cause a cold solder joint

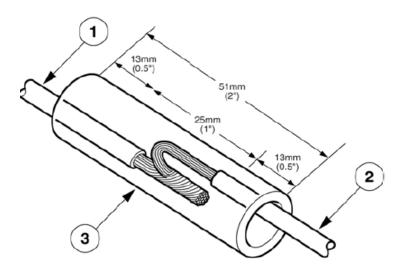

### Solder/Heat Shrink Wire Repair

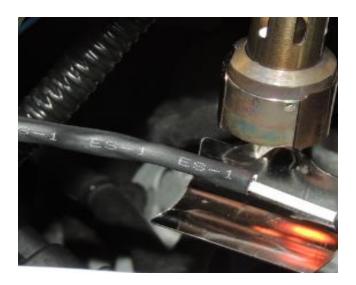

• Bend wire (#3) back and slide Heat Shrink Tubing (#2) over the solder joint

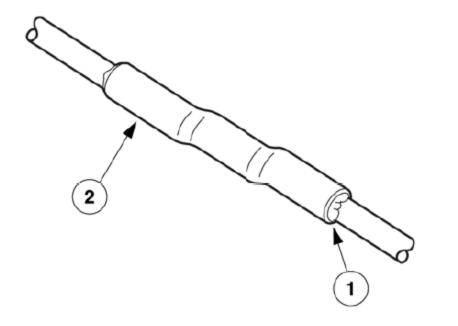

### Solder/Heat Shrink Wire Repair

 Heat Tubing with Rotunda Shielded Flameless Heat Gun NAIAT-R5902 (or equivalent) until adhesive is showing on each end of Heat Shrink Tubing (see page 16)

### Solder/Heat Shrink Wire Repair

• Properly heated Heat Shrink Tubing (#2) with Adhesive wax showing on both ends (#1)

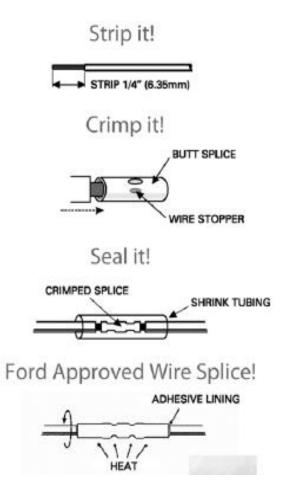

### **Splicing and Crimping Materials**

### Motorcraft Wire Splice/Shrink Tubing Packages

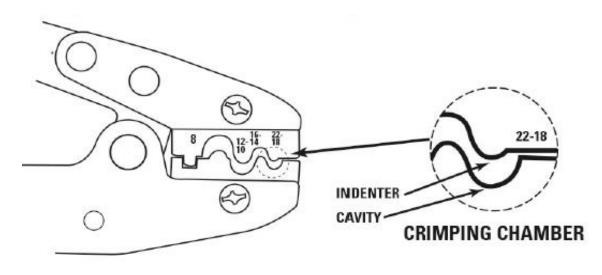

- Motorcraft wire splice/shrink tubing packages contain 5 uninsulated butt splices, 5 pieces of dual wall adhesive lined heat shrink tubing and an instruction sheet
- Packages are available at www.motorcraft.com in 4 wire ranges:

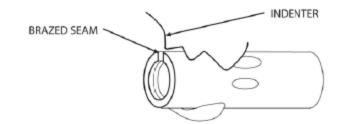

Motorcraft Part #	Wire Range
WT-56814	22-18 AWG
WT-56815	16-14 AWG
WT-56816	12-10 AWG
WT-56869	8 AWG

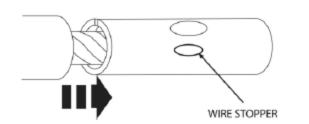

Recommended Tools are available at the Rotunda Technician Tool Program (RTTP) NAIAT-R5902 Shielded Flameless Heat Gun NAIAT-R5903 Complete Wire Splice Tool Kit

### **Splicing and Crimping Materials**

- Center one end of the splice in the appropriate crimping chamber
- Insert stripped wire into the barrel of the splice
- Holding the wire in place, squeeze tool handles until ratchet releases
- Repeat above steps to crimp the other half of the splice

Ford Motor Company

Sept 2015 Page 18 of 20

## **Overlay Wiring Circuits**

Overlaying (bypass) a circuit is an acceptable repair procedure for a visible pinched/broken or corroded/damaged wire(s) in a loom or an in-line connector where a replacement Terminal Kit is not available, as long as the following guidelines are used:

#### Pinched/Broken Wires

- Identify damaged area and remove/isolate wiring loom to prevent further damage
- Use a wire that is equal to, or one size larger than the American Wire Gauge (AWG) or metric equivalent size of the wire you are replacing
- Use a length of wire that is long enough to allow for the repair to be made without creating tension on the overall loom or added resistance to the circuit being repaired
- Wire must be taped back into loom using Coroplast Tape (or equivalent) and the loom positioned back into it's original position with all convolute/securing devices in place

#### **Corroded/Damaged Terminal (In-line Connector)**

- Use a wire that is equal to, or one size larger than the American Wire Gauge (AWG) or metric equivalent size of the wire you are replacing
- Use a length of wire that is long enough to allow for the connector to be disconnected for future testing/servicing
- Wire must be looped over and taped to the connector using Coroplast Tape (or equivalent)

**NOTE:** Inspect all wires and terminals within the connector and repair as needed. Soldering or Crimping procedures in this GSB or Cell 5 of the Wiring Diagram should be used for wiring repairs, whenever possible. Bypassed wires in the connector should be sealed to prevent further damage.

## **Resources**

## **Rotunda Tools – <u>www.onerotunda.com</u>** (RTTP tab)

- Wire Splice Tool Kit NAIAT-R5903 (includes the following)
  - Ratchet Action Crimp Tool (4 crimp chambers)
  - Shielded Flameless Heat Gun w/deflector
  - Adhesive lined Heat Shrinkable Tubing (55 2" cut pcs.)
  - Motorcraft Wire Splice/Shrink Tubing Kit (1 ea., WT-56814, WT-56815, WT-56816)
- Weller Professional Soldering Kit WELD550PK
- Nu-Di Flex Probe Kit NUD105-R025E
- Nu-Di Terminal Release Tools (3)
  - NUD900-001 1.0mm Flat, Tapered Point (Black)
  - NUD900-002 .64mm Terminal Removal Tool (Blue)
  - NUD900-003 1.5mm Terminal Removal Tool (Brown)
