HUD-26.01

"This software update contains the following key changes:

- Brightness of the screen has been improved in higher temperature conditions.
- When towing, your Heads Up Display will now show the Trailer Brake Gain bar actively changing in real-time as you apply the vehicle's brakes, rather than only showing when you use the manual slider.
- We've improved how your Heads Up Display tracks your steering wheel. The system now displays your exact steering angle through its full range of motion, removing previous display limits."
