

SSM 55005 2025-2026 Expedition/Navigator - Power Running Board (PRB) Operation In Auto Mode - Approach Detection Enabled

2025-2026 Expedition/Navigator vehicles equipped with power running boards do not deploy the running boards in auto mode when the easy entry/exit setting for "Approach Detection" is toggled on. This is a change from prior models. Currently, easy entry/exit settings in the vehicle's center display screen incorrectly indicates that power running boards will deploy during approach detection in auto mode. This will be corrected in a future Digital Experience over-the-air (OTA) update which will begin deploying in mid Q3, 2026. The Workshop Manual (WSM) and Owner's Manual have been corrected to explain proper operation of power running boards.
