SUBJECT: Proactive eGen Flex® Software Update

MODELS AFFECTED: eGen Flex Model Year 2022, 2023, 2024, 2025, and 2026 Buses

Introduction

Allison Transmission is authorizing a focused Field Action to update the software and the Software Identification Number (SID) in buses equipped with the Allison eGen Flex system.

The software update includes:

- Drive Unit fluid expulsion through the breather mitigation.
- Enhanced Dual Traction Inverter (DTI), Hybrid Beltless Alternator (HBA) or DC-DC Converter, and Rechargeable Energy Storage System (RESS) cooling systems fault detection.
- Reduction of false Diagnostic Trouble Codes (DTCs) related to Rechargeable Energy Storage System (RESS) welded relay faults.

As part of the fluid expulsion mitigation effort, the following actions are required:

1. Install new SID.
2. Reset the Drive Unit fluid level per the updated calibration.
3. Install new Original Equipment Manufacturer (OEM) dipstick.

This release also modifies existing DTC logic and introduces new DTCs. These new codes will detect vehicle cooling system issues and alert the operator when corrective action is required. The full list of updated and new DTCs is provided in [Table 4](#). For guidance on troubleshooting and resolving issues related to these DTCs after the proactive software is installed, refer to [Reactive Repairs](#).

Authorized vehicles for this update are listed in [Table 6](#).

To ensure the highest quality of work and minimize downtime, verify that each vehicle has no issues before performing the software update.

Process

Software Update:

1. Connect external 24V DC power supply to maintain house battery voltage during software load.
2. Record bus number, VIN, transmission serial number, and bus mileage via odometer.
3. Key ON bus with engine OFF.
4. Open Allison DOC® Classic (H 40/50 EP™ and eGen Flex).
5. Select CONNECT.
6. Once connected, select CALIBRATION INFORMATION.
7. Document currently programmed System ID (SID) on repair order prior to reprogramming.
8. Save Allison DOC snapshot.
9. Disconnect and close Allison DOC Classic.

NOTE: Steps [10-18](#) require online connection.

10. Open and log into Allison TCM Reflash™ Classic.
11. Select H 40/50 EP™/eGen Flex under database selection.
12. Select FILE, then APPLICATION SETUP. Ensure the translator device selected in the communications adapter box matches the physical translator device being used and 500k is selected in the BAUD rate box.
13. Select ADD.
14. Single left click the TCM assembly number text box.
15. Enter Allison Part Number (APN) from [Table 6](#).
16. Select ADD inside the popup window.
17. Single left click on the added APN in the top box.
18. Select SUBMIT.
19. Once downloaded, document the SID in the Calibration to Load into ECU/TCM box on repair order.
20. Single left click on the SID/APN in the bottom box.
21. Select LOAD.
22. Fill out all fields on the Load Report Form (refer to [Figure 1](#)).

NOTE:

Load Report Form

SID:

P/O #:

Vehicle Identification # (VIN):

Recal Type:

Trans. S/N: Customer Vehicle #:

Comments:

7001297

Figure 1. Load Report Form

23. Select ENTIRE VEHICLE.

NOTE: TCM flash will step through programming of applicable eGen Flex controllers. Once fully completed, TCM reflash will provide a report of updated controllers. Take picture or screenshot of the updated controllers.

24. Wait for programming to complete on all controllers.
25. Key OFF for 30 seconds. Key back ON with engine OFF.
26. Open Allison DOC Classic (H 40/50 EP™ and eGen Flex).
27. Select CONNECT.
28. Once connected, select CALIBRATION INFORMATION.
29. Document the updated SID on repair order and verify it matches the SID documented in step 19.
30. Clear all inactive codes in memory.
31. Disconnect and close Allison DOC Classic.

Dipsticks — Procurement

- **Gillig Buses**
 - The OEM will supply the dipsticks to the Transit Authority prior to the Field Action activities.
 - The Gillig part number for the new dipstick is P/N 02-44651-009.
- **New Flyer Buses**
 - Contact the New Flyer Parts Department at newflyerparts@nfi.com or 1-800-665-2637 to order the new dipstick P/N 1152493.

Set Fluid Level:

1. Ensure the following operating conditions are met:
 - Engine is at idle (625-850 rpm).
 - Sump fluid at operating temperature of 40°C-80°C (104°F-176°F).
 - Drive Unit output shaft stopped.
 - Drive Unit in **N** (Neutral).
 - Oil Level Sensor (OLS) functioning properly.
 - Vehicle parked on level ground.
2. Check the fluid level on the Push Button Shift Selector (PBSS). To display fluid level, simultaneously press the ↑ (Upshift) and ↓ (Downshift) arrow keys on the PBSS and hold for five seconds.
3. Document the fluid level shown on the PBSS display (OK, Lo 1, Lo 2, Hi 1, Hi 2, etc.).

NOTE: The updated calibration lowers the acceptable fluid volume by approximately 1.66 L (1.75 qts) compared to the previous "OK" level.

4. Adjust fluid level according to the PBSS reading (refer to [Table 1](#)).
 - a. If necessary, add or remove fluid in 0.24 L (0.25 qt) increments until the PBSS reads "OL OK".

Table 1. Fluid Shift Selector Display

Display Sequence	Display Meaning
oL,oK	Fluid level is correct
oL,Lo,01	Fluid level is 0.9 L (1 qt) low
oL,HI,01	Fluid level is 0.9 L (1 qt) high

5. With the engine running, re-check the fluid level.
 - a. If necessary, add or remove fluid in 0.24 L (0.25 qt) increments until the PBSS reads "OL OK".

NOTE: Fluid can be removed via an installed oil sample port, compressed air operated pump with a tube down the dipstick tube, or the drain plug. Draining into a 0.95 L (1 qt) sample bottle is recommended for measuring the removed volume.

6. Install new OEM dipstick. Discard removed dipstick.

Warranty Claim Submittal Information — Proactive Updates

- Allison service outlets shall submit a 4WARD claim for each serialized unit listed in this letter under [Table 6](#). In each Field Action 4WARD claim, any labor or travel cost beyond the scope of the Field Action letter but necessitated by the Field Action must be explained and justified in the claim narrative, otherwise they will be deducted from the claim.
- Allison DOC snapshot before and after software programming must be attached to warranty claim.
- Work unrelated to the scope of the Field Action must be submitted under a separate 4WARD claim. Allison service outlets must follow the current guidelines per the published Allison labor time guide for work performed when adding any additional labor operations. Refer to [Table 3](#) for labor operations included in this Field Action.

Table 2. Claim Information — Proactive Updates

Claim Type	Campaign
Campaign Indicator	2026FA02
Complaint Code	AT02
Failure Code	CC03
Primary failed part	400 ECU Recalibration

Table 3. Labor Operation Codes — Proactive Updates

Product Code 71		
Labor Code	Labor Hours	Labor Operation
00096501	1.0 hours	Recalibrate Electronic Control Unit (ECU)
00096900	0.2 hours	Reset Fluid Level and Install Dipstick

- Warranty acknowledges that the OEM dipstick may not be available when the calibration update is performed. In such cases, please submit the campaign claim for the calibration. After the dipstick is installed, initiate an appeal to the calibration claim to add the applicable labor per [Table 3](#), including the part if it was purchased. Ensure compliance with every step of the appeal process, which includes selecting Appeal, editing the claim as needed, and submitting under the summary tab. For detailed instructions, search for Claim Appeal Process How-to in the Articles section within 4WARD.
- 4WARD claims will provide users with two distinct templates designed to indicate the presence or absence of dipstick installation. Users are unable to remove labor and parts from these templates. Each claim will be accompanied by the following options:
 - (SC)(2026FA02) (CT-)(AT0654746) — 1.2 Hours, includes dipstick labor
 - (SC)(2026FA02) (CT-)(AT0659343) — 1 Hour, excludes dipstick labor
- Allison permits an appeal up to 120 days after the claim has been filed. If the dipstick has not arrived within this timeframe, please reach out to warranty@allisontransmission.com for further assistance.

DTC List

The following DTCs have been modified or introduced to improve detection of vehicle side cooling issues.

Table 4. Applicable DTC List

Fault Name	Allison DTC (DOC)	Allison SPN - FMI	Allison Lamp(s)
Inverter Cooler Fan Inoperable	86-04	10117 - 7	CHECK SYSTEM
Inverter Cooler Fan CAN Link Lost with HCM	86-05	10117 - 9	CHECK SYSTEM
Inverter Cooler Over-Voltage	86-06	7978 - 3	--
Inverter Cooler Under-Voltage	86-07	7978 - 4	--
Inverter Cooler Pump Inoperable	86-08	7978 - 7	CHECK SYSTEM
Inverter Cooler Pump CAN Link Lost with Fan	86-09	7978 - 9	--
Inverter Cooler Pump Dry Run/(Low Coolant Flow)	86-11	N/A	--
Inverter Cooler Pump Bearing Failure	86-12	N/A	--
Inverter Cooler CAN Link Lost with Pump	66-53	N/A	--
Inverter Cooler CAN Data Fault from Pump	67-53	N/A	--
CAN Link Lost with Inverter Cooler Fan Controller	66-50	N/A	CHECK SYSTEM
Inverter Cooler - Crank Inhibit	86-10	7978-11	CHECK SYSTEM
Inverter Cooler Pump Performance	86-15	7978-14	STOP SYSTEM
RESS TMS CAN Link Lost with RESS	86-20	13142 - 9	--
RESS TMS Compressor Faulted	86-21	8232 - 7	CHECK SYSTEM
RESS TMS Internal CAN Failure	86-22	8232 - 9	--
RESS TMS Pressure Sensor Shorted	86-23	13142 - 21	CHECK SYSTEM
RESS TMS Pressure Switch Open	86-24	13142 - 20	CHECK SYSTEM
RESS TMS Fan Inoperable	86-25	8232 - 12	CHECK SYSTEM
RESS TMS Heater Faulted	86-26	13142 - 12	CHECK SYSTEM
RESS TMS Low Voltage Over-Voltage	86-27	13142 - 15	--
RESS TMS Low Voltage Under-Voltage	86-28	13142 - 17	--
RESS TMS High Voltage Over-Voltage	86-29	13142 - 3	CHECK SYSTEM
RESS TMS High Voltage Under-Voltage	86-30	13142 - 4	CHECK SYSTEM
RESS TMS Coolant Sensor Faulted	86-31	13142 - 19	CHECK SYSTEM
RESS TMS Pump Inoperable	86-32	13142 - 7	CHECK SYSTEM
RESS TMS Compressor Over-Temperature	86-33	13142 - 11	CHECK SYSTEM
RESS TMS Ambient Temperature Thermistor Shorted	86-34	13142 - 13	CHECK SYSTEM
RESS TMS Compressor Thermistor Shorted	86-35	13142 - 14	CHECK SYSTEM

Fault Name	Allison DTC (DOC)	Allison SPN - FMI	Allison Lamp(s)
RESS TMS Coolant Temperature Thermistor Shorted	86-36	13142 - 31	CHECK SYSTEM
RESS TMS Pump Bearing Failure	86-39	N/A	--
DC-DC Converter Voltage Performance	75-01	8587 - 2	CHECK SYSTEM
DC-DC Converter Current Performance	75-02	8588 - 2	CHECK SYSTEM
DC-DC Converter (HBA1) Over Voltage Fault	87-03	8569 - 3	--
DC-DC Converter (HBA1) Under Voltage Fault	87-04	8569 - 4	--
DC-DC Converter (HBA1) Over Temperature Fault	87-05	8592 - 0	--
DC-DC Converter (HBA1) Internal HW Fault	87-06	8569 - 7	--
DC-DC Converter (HBA1) Over Current Fault	87-07	8588 - 0	--
DC-DC Converter (HBA2) Over Voltage Fault	87-08	8895 - 3	--
DC-DC Converter (HBA2) Under Voltage Fault	87-09	8895 - 4	--
DC-DC Converter (HBA2) Over Temperature Fault	87-10	8936 - 0	--
DC-DC Converter (HBA2) Internal HW Fault	87-11	8895 - 7	--
DC-DC Converter (HBA2) Over Current Fault	87-12	8914 - 0	--
CAN Link Lost DC-DC Converter (HBA)	66-41	8569 - 9	--
High Voltage System Under Voltage — Cranking Disabled	80-46	--	STOP SYSTEM

Reactive Repairs

This section outlines the troubleshooting and repair process for DTI Phase Short related failures that occur **after** installation of the proactive software update.

These steps are designed to provide a consistent, simplified repair path whenever the specified DTC conditions are present.

Process

1. Connect to the vehicle with Allison DOC and review all active and stored DTCs.
2. If any DTI Phase Short DTCs (refer to [Table 5](#)) are present, complete a DTI checksheet.

Table 5. DTI Phase Short DTCs

DTC	Fault Description
73/74-95	Motor Torque Integrity
73/74-27	Inverter A/B Phase A IGBT Saturation Fault
73/74-28	Inverter A/B Phase B IGBT Saturation Fault
73/74-29	Inverter A/B Phase C IGBT Saturation Fault

3. If the checksheet indicates a failed DTI, proceed as follows:
 - a. If any OEM cooling system DTCs (refer to [Table 4](#)) are active or stored, or if there is evidence of a cooling system issue—such as low/empty coolant, leaks, or a malfunctioning coolant pump—contact your local OEM representative for troubleshooting and warranty support.
 - b. If no cooling system DTCs are present and there is no evidence of a cooling system issue, replace the DTI and submit a warranty claim to Allison, as applicable.

Warranty Claim Submittal Information — Reactive Repairs

- If the steps above indicate that a warranty claim is appropriate, initiate a TAC case with Allison. The TAC Case Preparation Form must be fully completed. Required documentation includes:
 - Allison DOC snapshots taken prior to repair.
 - Confirmation of software version installed.
 - Fault occurrence conditions.
 - Photos, completed DTI checksheet, and supporting diagnostic narrative.
- Allison Authorized locations must then submit a 4WARD claim. This verifies eligibility but does not guarantee coverage. Reactive repairs must be submitted under Standard Warranty using the Machine Claim Type.
- When a claim is deemed appropriate, the warranty will cover up to one hour of troubleshooting time (Labor Op 00096901). Diagnostic time beyond one hour will not be covered. For DTI replacement, the warranty provides up to three total hours for removal and replacement (R&R Labor Op 00094000). Additional labor outside this limit is not covered. Labor outside these guidelines—such as additional troubleshooting, non-warranty customer concerns, or issues due to improper installation—is not eligible for coverage. Exceptions may be granted only when pre-authorized under special circumstances. Any additional labor or travel costs must be clearly justified in the claim narrative and unsupported charges will be deducted.
- All claims must include complete documentation such as Allison DOC snapshots **prior** to repair, relevant checklists, diagnostic files, and required photos.

Vehicle List

The following list of vehicles is subject to change without notice.

NOTE: This list is sorted in chronological order by the last six digits of the VIN.

NOTE: For certain units, the transmission serial number (S/N) is not currently known and must be verified onsite at the vehicle. The applicable units are identified in the table below as "See Note" in the Drive Unit Serial Number Column. If a channel partner receives one of these units, they will need to email warranty@allisontransmission.com to request that the additional units be added to the campaign. This allows our warranty team to validate the VIN and complete the campaign setup.

Table 6. Vehicles Authorized for Field Action

Vehicle Identification Number (VIN)	Drive Unit Serial Number (S/N)	Allison Part Number (APN)
5FYH8FR0XNF105991	7110010201	HEVC1016
