Dear Shane Floyd,

On March 19th, 2019 we were notified by the National Highway Traffic Safety Administration (NHTSA) that the brake lights (**M6BTT**) used on the Union City Rescue have been recalled. The description of the defect is as follows - **“For the recall population, the break light may activate if there is a transient voltage on the brake input line (e.g., without further break input), but can be returned to normal operation when a brake input is applied and then removed. Whelen determined that the root cause of this condition was tied to transient voltage on the input line creating a false and steady activation of the brake light. The condition is dependent on the specific wiring of the vehicle and other installed equipment. The product functions normally if it is not exposed to these specific conditions, but the condition has the potential to occur in the entire recall population”**

As of this date there has been no warranty claims, or any crashes, fatalities, damage to vehicles, or any other field events related to this issue. Watts Manufacturing, LLC will be providing you with free replacements for you to install on the Fire Rescue Vehicle.

If you would like to contact Whelen Engineering Co Inc to reimburse you for the labor needed to install these lights or any other reason, here is their Recall Information Representative Information:
