Description of Defect :

Description of the Defect : Per FCA recall notice 17V821: Depression of the brake pedal when the vehicle is in PARK and running energizes the Brake Transmission Shift Interlock ("BTSI"). When the BTSI is energized for prolonged periods, the temperature rises, causing the BTSI housing plastic to swell and the grease to degrade, which causes the BTSI locking pin to stick in the open position. With the BTSI locking pin in the open position, the transmission can be shifted out of PARK and to or from any gear position without depression of the brake pedal and/or without the key in the ignition, if key applicable.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : Per FCA recall notice 17V821: The defect can result in the ability to shift the transmission out of the PARK position without a key in the ignition or a brake pedal application, which increases the potential for an unintended vehicle rollaway that may result in a vehicle crash or injury without prior warning.

Description of the Cause : Per FCA recall notice 17V821: None Provided

Identification of Any Warning that can Occur : Per FCA recall notice 17V821: This issue is not detectable to consumers.
