Description of Defect :

Description of the Defect : There is a possibility of an electric short-circuit in the A/C blower control unit caused by water ingress.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : Water intrusion, over time, could lead to a short circuit in the A/C blower control unit. In rare instances, the electrical short could result in a thermal event or fire. This issue is detectable by the driver when the vehicle is operated, and the vehicle can be brought to a controlled stop and all occupants can exit the vehicle. However, it is possible that the thermal event or fire could occur after the vehicle is parked and shut off. To mitigate this risk, customers will be provided with instructions to park their vehicles outdoors until they are remedied.

Description of the Cause : TBD

Identification of Any Warning that can Occur : When the vehicle is driven, the smell of melting components and smoke, especially from the air outlets, can provide a warning to the driver and occupants.

Chronology :

The first complaint regarding the subject vehicles was received in 2013 and was understood as an isolated incident at that time. An additional incident in 2015 was investigated, but no common root cause or systematic issue could be identified. Four additional incidents in the U.S. were reported over the next three years, but the investigation and analysis was inconclusive as to root cause due to damage to the relevant components and/or differences in the circumstances of the individual incidents. For most of the incidents the smoldering self-extinguished. None of the incidents involved personal injuries.

In January and April 2019, Porsche was informed of two incidents where the post-incident condition of the vehicle, and components in the area where the incident began, enabled a root cause analysis to be successfully completed.

After analyzing the information linked to these two most recent incidents, certain similarities to prior isolated incidents were identified.

Additional analysis of the 2019 incidents led to the conclusion that the failures were systematic, and arose as the result of water intrusion into the A/C blower control unit on subject vehicles.

On April 17th, 2019, the matter was presented to the product safety committee at Dr. Ing. h.c. F. Porsche AG, where a safety defect could not be ruled out and therefore it was decided to implement a voluntary safety recall for the potentially affected vehicles.

Description of Remedy :

Description of Remedy Program : The permanent remedy will involve replacement of the A/C blower control unit with a redesigned unit with improved water intrusion resistance to help prevent water ingress.

Porsche is also finalizing an interim remedy that will depower the A/C blower control unit when the vehicle is shut-off. This remedy will be offered until an adequate supply of the redesigned control units are available.

How Remedy Component Differs from Recalled Component : The final remedy components will have an improved sealing to prevent water ingress.

Identify How/When Recall Condition was Corrected in Production : The subject vehicles are no longer produced.

Recall Schedule :

Description of Recall Schedule : Porsche expects to issue an interim owner notification as quickly as practicable within the next 60 days.

Planned Dealer Notification Date : JUN 23, 2019 - JUN 23, 2019

Planned Owner Notification Date : JUN 23, 2019 - JUN 23, 2019
