Chronology :

4/9/2019 – Report was made through normal warranty claims that a condition exists with wiring to the power center being pinched between the floor and the chassis frame causing a fault in the circuit protection in most situations.

4/10/2019 – Investigation opened to determine cause and scope of the failures.

5/16/2019 – Keystone Safety Committee reviewed the information gathered from the cause and scope investigation. Information concluded that the data reviewed indicated a unanimous vote for a voluntary recall concerning only Fuzion 429 model because of the configuration and wire routing on this particular floor plan. Investigation called for to determine affected unit range.

5/17/2019 – Investigation concluded and scope completed

Description of Remedy :

Description of Remedy Program : The remedy is to inspect the wiring and repair as needed.

How Remedy Component Differs from Recalled Component : The wiring harness has been relocated and is no longer in the way of the framing to get pinched causing a short to ground condition.

Identify How/When Recall Condition was Corrected in Production : Production was made aware of the wiring issue and a running change was made during the investigation process.

Recall Schedule :

Description of Recall Schedule : Keystone will notify the dealers and owners of the recreational vehicles by letter. A final copy of the owner letter will be provided to NHTSA, along with the dealer repair procedures.
