IMPORTANT SAFETY RECALL

This notice applies to your vehicle(s):

Dear KME Vehicle Owner:

This notice is sent to you in accordance with the requirements of the National Traffic and Motor Vehicle Safety Act.

Why is a recall being conducted?

KME has decided that a defect which relates to motor vehicle safety exists in certain model year 2016-2020 KME vehicles manufactured from January 2016 through February 2020.

Vehicles included in this recall have battery jumper studs mounted to a bracket that is attached to the battery mounting tray and the jumper stud connection was sprayed with an oil-based battery corrosion preventative. The wire terminals for the jumper studs have a small gap between the jumper stud connection and the ground. If the corrosion preventative is lacking by either its removal or insufficient application and corrosion is allowed to accumulate, a short circuit may occur between the stud and the retaining ring. An electric arc may occur near the battery box, potentially draining the battery, preventing the vehicle from performing its mission.

What are we doing about the problem?

KME or its Dealers will clean the jumper studs, connection surfaces, and connections. The connection surfaces and wire terminals will then be sealed with a silicone electrical sealant. Estimated time for the remedy is 1 hour.

What should you do?
