#### **AFFECTED VEHICLES**

- 2018-2020MY Isuzu FTR Vehicles Produced Between February 6, 2018 and February 5, 2020

#### **CONDITION**

Isuzu Motors Limited has decided that a defect, which relates to motor vehicle safety, exists in certain 2018-2020MY Isuzu FTR vehicles produced between February 6, 2018 and February 5, 2020. In the affected vehicles, the chassis wire harness outside the relay box was improperly routed. As routed, it can contact the suspension's leaf spring hanger bracket, causing the harness to chafe and the wires to be damaged. Depending on which of the wires within the harness is affected, different systems could be impacted, yielding varying possible results including the possibility of a vehicle stall and/or reduced functionality of the ABS brake system. These results could increase the risk of a crash.

#### **CORRECTION**

Isuzu dealers will inspect the chassis harness and install additional clamps to ensure the wire harness is secured away from the hanger bracket. If the wire harness is chafed, it will be repaired or replaced. This service will be performed **free of charge**.
