Dear General Motors Customer:

## IMPORTANT

- Your vehicle is involved in GM safety recall N202309680.

### Why is your vehicle being recalled?

In your vehicle, the roof-rail airbag (“RRAB”) inflators, which are located on the left and right-side roof rails above the headliner, may contain a manufacturing defect that can cause the inflator end cap to detach from the inflator vessel. If the end cap separates from the inflator, the compressed gas will escape from the RRAB inflator and the end cap can be propelled into the vehicle, potentially causing an occupant injury if the vehicle is occupied.

### What will we do?

**Parts to repair your vehicle are not currently available**, but when parts are available, your GM dealer will replace suspect RRAB modules. Suspect modules may be on the left side and/or right side. This service will be performed for you at **no charge**.

We are working as quickly as possible to correct this condition. When parts are available, we will send you another letter asking you to take your vehicle to your GM dealer to have your vehicle serviced. You can also check the status of this recall at: <https://my.gm.com/recalls>. If you have already paid for repairs for this condition, you may submit those charges using the reimbursement request form that will be provided with the next letter.
