### Dealer Bulletin: SRV-RCL-21-010

Dear Ducati Owner,

This notice is sent to you in accordance with the requirements of the U.S. National Traffic and Motor Vehicle Safety Act. Ducati Motor Holding S.P.A. has decided that a defect which relates to motor vehicle safety exists in certain Monster Vehicles as listed above. Our records indicate that you are the owner of a Ducati motorcycle affected by this safety recall campaign. Please take the time to read this letter and help us take the appropriate steps to ensure that your vehicle is operating properly.

### What is wrong?

Rear brake hoses installed on certain motorcycles (Monster 821 and Monster 1200 versions only) may be subject to damage to the flexible plastic part due to excessive exposure to heat from the vertical head exhaust manifold. This can lead to a sudden loss of pressure in the rear braking system. In particular, this condition will occur if the motorcycle is left idling on the side stand or rear stand for prolonged periods of time (e.g. during warm-up).

To remedy this problem, new hoses with a longer length of the rigid (metal) section have been developed to move the flexible (plastic) part of the hose away from the hot air flow of the exhaust manifold.

The front and rear brake system for this motorcycle are hydraulically independent; therefore, performance of the front brake, which provides full stopping ability, is NOT affected by the rear brake system.
