## Safety

This document provides general instructions. Many variables can change the circumstances of any procedure, i.e. the degree of difficulty involved in the service operation and the ability level of the individual performing the operation. This document cannot begin to plot out procedures for every possibility, but will provide the general instructions for effectively installing, removing or servicing the system. In the event the skill level required is too advanced or the procedure too difficult, a certified technician should be consulted before performing the necessary operation. Failure to correctly install, remove or service the system may result in voiding the warranty, inflicting injury or even death.

The "WARNING" symbol above is a sign that a procedure has a safety risk involved and may cause death, serious personal injury, severe product and/or property damage if not performed safely and within the parameters set forth in this document.

The "CAUTION" symbol above is a sign that a procedure has a safety risk involved and may cause personal injury, product and/or property damage if not performed safely and within the parameters set forth in this document.

## Inspection

The provided gauge has a colored segment at one end (Fig. 5). Use the gauge as outlined in the instructions below to determine any possible break in the seal.

1. Be sure window is in closed position.
2. Lightly insert the gauge into the gap between the glass and the frame (Fig. 6) starting near the hinge on the exterior side of the window.
3. The gauge should stop within the colored segment (Fig. 7).
4. Continue reinserting the gauge at different points, working around the glass.

**NOTE:** If the gauge inserts beyond the colored segment (Fig. 8) this indicates a possible break in the seal and the vent of the window will need replacing.
