Description of the Defect : Gearbox oil quantity too low may lead to short-term hydraulic pressure drop resulting in clutch slippage. In extreme driving situations (race track operation), the transmission oil can foam and leak out of the gear vent.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : Clutch slippage can cause a loss of drive power and increase the risk of a crash. A transmission oil leak in the presence of hot exhaust components can increase the risk of fire.

Description of the Cause : A defective scale at the supplier delivered wrong oil weight data for oil filling for a certain number of transmissions.

Identification of Any Warning that can Occur : In the event of clutch slippage, the driver receives a warning message on instrument cluster.

Involved Components :

Component Name 1 : Gearbox oil

Chronology :

In February 2022 Automobili Lamborghini S.p.A. received information from Volkswagen Group that a certain number of transmissions may have been delivered by the supplier with an insufficient amount of oil. An investigation started immediately to determine the possible effects and root cause.

In March 2022, results from the investigation revealed that the issue was caused by a defective scale at the supplier which delivered wrong oil weight data for oil filling. Also, the risk assessment indicated a possibility that in extreme driving situations (race track operation), the transmission oil can foam and leak out of the gear vent.

In March 30 the matter was presented at the Product Safety Committee which determined that a potential safety consequence cannot be ruled out and decided to conduct a voluntary safety recall for the affected vehicles.

Lamborghini is not aware of any warranty claims or customer claims due to this issue.

Description of Remedy :

Description of Remedy Program :	The oil level within the gearbox will be checked and corrected. Lamborghini will offer a reimbursement plan under this recall.
How Remedy Component Differs from Recalled Component :	The recalled component is the amount of oil that was filled in the gearbox. The recall remedy component can be distinguished from the recalled component because the oil level will be according to requirements.
Identify How/When Recall Condition was Corrected in Production :	Vehicles produced after December 21, 2021 have been built with gearboxes filled with the correct amount of oil.

Recall Schedule :

Description of Recall Schedule :	Customer will be notified by registered mail and customer app while dealers through Lamborghini dealer portal.
