Subject: Safety Recall 24iH - Engine Control Module (ECM)

Dear Audi Owner,

What is the issue? The engine control module (ECM) in affected vehicles may contain a semiconductor that was not produced according to manufacturing specifications. The insulation layer that is required to prevent short circuits within the semiconductor may be missing on these semiconductors. If this condition is present in the vehicle, it might cause a failure of the affected semiconductor, thus influencing fuel injection and engine operation. This could lead to a stalling condition, which could increase the risk of a crash.

What will we do? To correct this defect, your authorized Audi dealer will replace the engine control module (ECM). This work will take about an hour to complete and will be performed for you free of charge. Please keep in mind that your dealer may need additional time for the preparation of the repair, as well as to accommodate their daily workshop schedule.

What should you do? Please contact your authorized Audi dealer without delay to schedule this recall work. For your convenience, you can also visit www.audiusa.com and click on the "Find a Dealer" link to locate a dealer near you and schedule this service.
