			Country	Beginning Model Year	Ending Model Year	Vehicle										
			USA	2022	2023	GOLF GTI										
			USA	2022	2023	GOLF R										
			What is the safety concern for Safety Recall 19Q8?	During vehicle production, the radiator may not have been affixed correctly to the intercooler. This can result in the radiator becoming loose and causing a coolant hose to contact the V-belt pulley. A coolant hose that contacts the V-belt pulley can become damaged, potentially resulting in a coolant leak. A large amount of coolant leaking onto the roadway may increase the risk of a crash for the following traffic. If the red warning light in the instrument cluster is ignored and the vehicle continues to be driven without coolant, the engine may overheat, potentially leading to a vehicle fire.												
Are there any precautions I should take because my vehicle is part of Safety Recall 19Q8?	If a low coolant level is detected, the driver will see a red warning light in the instrument cluster. Customers with vehicles experiencing this condition are advised to contact an authorized Volkswagen dealer without delay to have the vehicle inspected.															
What is the repair for the Safety Recall 19Q8?	To address this potential issue, your authorized Volkswagen dealer will inspect the affected vehicles to see if the radiator is correctly affixed to the intercooler. If a loose connection is found, the coolant hose and the poly V-belt will be checked for damage. If damage is found, the damaged parts will be replaced.															
When will the repair for Safety Recall 19Q8 be available?	Repairs for this recall have begun. Please contact your authorized Volkswagen dealer without delay to schedule this recall repair. To set up an appointment online, please visit www.vw.com/find-a-dealer .
