## Chronology :

This issue was submitted to GM's Speak Up For Safety (SUFS) program on August 30, 2022, following future vehicle validation testing that led to discovery of the condition in 2021 model year SUVs. GM opened an investigation on September 16, 2022.

GM determined that the body control module (BCM) software in these vehicles, under a combination of certain pre-conditions, may fail to deactivate the DRLs when the headlamps are on. A regulatory assessment was conducted to evaluate whether the condition presented a potential noncompliance with the DRL activation requirements in S7.10.5, Table I-a. of FMVSS 108. On October 27, 2022, GM's Safety Field Action Decision Authority (SFADA) decided to conduct a recall for potential noncompliance with this standard.

## Description of Remedy :

Description of Remedy Program : General Motors will update the software in the vehicles' Body Control Module (BCM) to correct the condition.

Pursuant to 49 C.F.R. § 573.13(d) (1), all covered vehicles are under warranty, so reimbursement is not offered.
