

New Safety Recall Advanced Communication – 18A

FCA US LLC (FCA US) has announced an equipment safety recall on certain MOPAR Generation 1 Intake grid heater relays part **number 68444169AB**.

REASON FOR THIS SAFETY RECALL

Some Generation 1 solid state intake air grid heater relays were improperly designed and could fail internally. An electrical short in the relay, when installed on a vehicle, can potentially lead to a vehicle fire with the ignition on or off. A vehicle fire can result in increased risk of occupant injury and/or injury to persons outside the vehicle, as well as property damage.

SERVICE ACTION

FCA US will conduct a voluntary safety recall on all affected parts to repurchase suspect Relays. If installed on a vehicle, customers are advised to not park these vehicles inside of buildings or structures, or near other vehicles until the vehicle has the final repair completed. The remedy for this condition is not currently available. Dealers will be notified of the launch of this safety recall by way of established communication methods.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
