Chronology :

In late October, 2022 DTNA identified a warranty claim on an upper bunk assembly falling (albeit with no

notice of injury nor death) and opened an preliminary investigation. In November, 2022, after identifying additional reports, DTNA opened an investigation to further review with its bunk suppliers. Investigative work continued through December and early to mid-January. In late-January, 2023 DTNA received a report back from the supplier identifying that the bolt may not have been properly torqued. At no time prior to this report did DTNA reasonably believe that the supplied bed assembly was out of specification. Promptly after receiving this notification, on February 1, 2023 DTNA decided to initiate a voluntary safety recall for vehicles equipped with the bunk assembly built with under torqued bolts. In early May DTNA updated the Chronology with to clarify that there 5 warranty claims total between the dates of October 2021 and October 2022, with no other reports, and no death or injuries reported.
