## **New Safety Recall Advanced Communication – 19A**

FCA US LLC (FCA US) has announced a safety recall on certain 2018 through 2023 Model Year (JL) Jeep® Wrangler and 2020 through 2023 Model Year (JT) Jeep® Gladiator vehicles equipped with a manual transmission.

### **REASON FOR THIS SAFETY RECALL**

In some of the above vehicles equipped with manual transmissions, in some circumstances, the clutch pressure plate may become overheated through friction, which may lead the pressure plate to rapidly fracture. When a pressure plate fractures, it may result in cracks or holes in the transmission case, allowing heated debris to be expelled from the transmission case. In some circumstances, the operator may smell a clutch odor and or clutch slippage prior to the failure and may receive instrument cluster messaging. Heated debris expelled from the transmission bellhousing may come in contact with an ignition source in the vehicle or surrounding area, potentially leading to a fire. A fire can result in increased risk of occupant injury and injury to persons outside the vehicle.

### **SERVICE ACTION**

FCA US will conduct a voluntary safety recall on all affected vehicles. The remedy is currently under development. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 2nd Quarter of 2023.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
