

LABEL APPLICATION INSTRUCTIONS

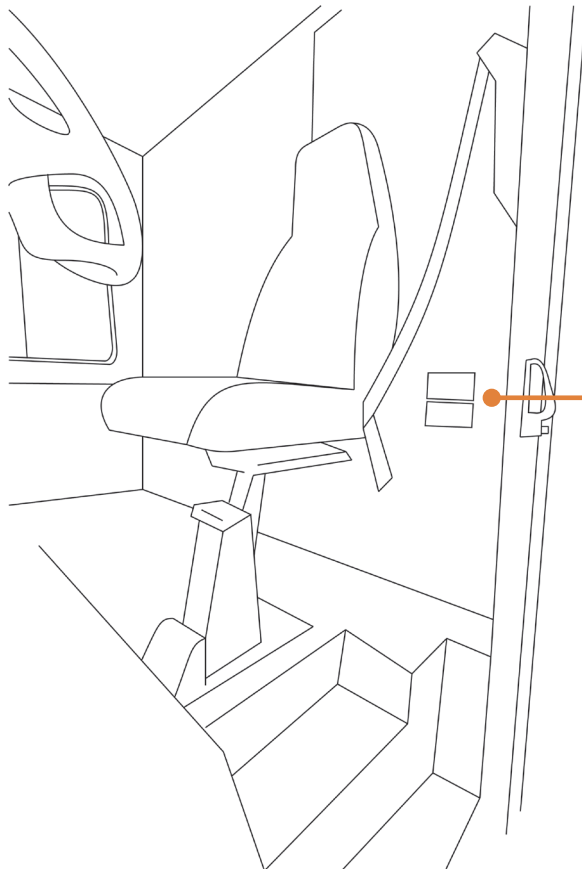

REC 001-23

Accompanying this instruction sheet are two (2) labels to be affixed to the interior wall of your vehicle's cab. This page explains where to place the labels.*

These labels are replacement certification labels. It is important that you place the corrected labels on top of the old labels, or remove the old labels entirely first and then place the corrected labels in the same location.

Instructions:

1. Locate the certification labels within your vehicle's cab. In most vehicles, these labels are affixed to the wall behind the driver's seat.
2. Identify the appropriate upper label by finding the Body ID Number and VIN at the bottom of the label. Remove the backing from the label. Place this label on top of the old label.
3. If applicable, identify the Vehicle Noise Emission Control Information label. Remove the backing from the label. Place this label on top of the old label.*
