Lamborghini Gallardo (Coupè And Spyder) - model year 2007,2008,2009

Lamborghini Murcièlago (Coupè And Roadster) - model year

2006,2007,2008,2009,2010

“Carbon Ceramic Brake disc screws ”

■ What is the problem on the affected vehicles?

On vehicles fitted with carbon ceramic brakes, the stainless steel screws fixing the rotor to the metal bell may fail due to stress corrosion cracking, if the vehicle has been used in extremely salty environments.

The customer will experience a noise when a screw fails and the brake continues to be 100% effective. However, if the affected disc was to lose 8 of the 10 screws there would be a loss of braking at that wheel. Automobili Lamborghini is not aware of any vehicle losing more than 3 screws.

■ What is the cause of this fault?

The screws which secure the Carbon Ceramic brake to the metal bell may fail due to stress corrosion cracking if the vehicle has been used in extreme salty environments.

■ What effect does the fault have?

The loss of a single screw will not have any adverse impact on the braking performance of the vehicle. The system can continue to operate correctly with up to 8 out of the 10 screws missing. There have been no reports of any vehicles losing more than 3 screws.

■ How can the damage be identified?

Noise when braking could be noticed if one or more screws are missing: in the case where more than 8 screws fail there will be a loss of braking at that wheel. A visual inspection of the affected screws could be performed looking for missing or loosen ones: this control need to be performed when brakes are cold.

Is there any risk for the car occupants?

In the case where more than 8 screws fail there will be a loss of braking at that wheel. This may lead to a small increase in stopping distance and could lead to a crash.

Automobili Lamborghini is not aware of any vehicle losing more than 3 screws worldwide.

■ Can I still use the vehicle ?

If no screws are missing the vehicle can continue to be used. The presence of the screws can easily be checked by looking through the spokes of the wheel to the brake disc. However, an appointment with a Automobili Lamborghini dealer should be made immediately.

■ Which vehicles are affected ?

- Lamborghini Gallardo Coupè and Spyder model year 2007,2008,2009.
- Lamborghini Murcièlago (Coupè And Roadster) model year 2006,2007,2008,2009,2010.

IMPORTANT NOTE

- Lamborghini Aventador (Coupè and Roadster) **ARE EXCLUDED** by this recall because they fit a different design of carbon brakes (Titanium screws).

■ Which chassis numbers are affected ?

- Lamborghini Gallardo Approximately 933 vehicles are affected worldwide.

VIN range: from ZHWGE12TX7LA04413 to ZHWGE54T99LA08928.

Lamborghini Gallardo Coupe and Gallardo Spyder belonging to model year 2007,2008,2009.

- Lamborghini Murcièlago Approximately 1516 vehicles are affected worldwide.

VIN range: from ZHWBE16S06LA01713 to ZHWBE81H9ALA04099

Lamborghini Murcièlago Coupe and Murcièlago Roadster belonging to model year 2006, 2007, 2008,2009,2010

“Carbon Ceramic Brake disc screws ”

■ Have any incidents already occurred on other customers' cars?

No, we are not aware of any customer complaints related to incidents.

■ What exactly needs to be repaired on the car?

The screws fixing the carbon ceramic brake must be replaced with ones made of titanium.

■ How long will the repair work take?

Normally, the repair work will take 3 working hours that may require you to leave your car at workshop at least 1 working day depending on personnel availability.

■ Will Automobili Lamborghini S.p.A. bear the costs of the repair work?

The costs of this campaign will be borne entirely by Automobili Lamborghini S.p.A.

■ Where can I have the repair work carried out ?

All Lamborghini dealers and Service points worldwide are informed.

■ Is it necessary to make an appointment at the workshop?

Yes, customer should contact a Lamborghini dealer or Service point.
