

SSM 48717 - 2020 F-Super Duty - Blind Spot Information System (BLIS) and Cross Traffic Alert (CTA) FDRS Configuration

Some 2020 F-Super Duty vehicles equipped with the Blind Spot Information System (BLIS) and Cross Traffic Alert (CTA) may require the removal of the factory equipped tail lamps to accommodate the use of aftermarket equipment. Once the tail lamps are removed, this may result in BLIS and CTA warning indicators illuminated in the instrument panel cluster (IPC). To clear these warning indicators, the BLIS and CTA systems will need to be disabled using the FDRS scan tool. Start a vehicle session in FDRS using the vehicles VIN and go to the toolbox tab. The BCM will have an application labeled Disable/Enable Blind Spot Information System. Download and run this application to enable or disable the BLIS And CTA systems.
