

SSM 49147 - 2021 E-Series, F-650/F-750 - Remote Keyless Entry (RKE) Key Fob - IDS Programming Procedure Available

Some 2021 E-Series/F-650/F-750 vehicles may exhibit inoperative RKE key fobs resulting in key fob replacement or some customers may seek service to program additional key fobs to the vehicle. A new IDS procedure has been released with IDS version 119.01 to allow for RKE key fob programming. Start a vehicle session and click on the Toolbox Tab. Click on Body > Security > Remote Keyless Entry to begin programming new and/or additional key fobs. Only 4 RKE key fobs total can be programmed to each vehicle. All vehicles are equipped with a wired in connectivity device. If the customer elects to program this connectivity device it will take up 1 of the 4 available slots. The Workshop Manual procedure for RKE programming is also being updated.
