

## **SSM 49672: 2021 Mustang Mach-E Front Luggage Compartment Closing Effort**

Some 2021 Mustang Mach-E vehicles may exhibit a concern where the front luggage compartment hood is hard to close. As the hood is closed, air becomes trapped in the front luggage compartment, increasing the closing effort. To properly close the hood, apply closing force as the hood is lowered. Then verify the hood is fully closed. Allowing the hood to close on its own weight may not be enough effort to properly latch the front luggage compartment hood. No additional adjustments are required for the hood / latch.
