

SSM 50580 - 2022 Bronco - Ford Accessory JBL® Soundbar - Programming Difficulty

Some 2022 Bronco vehicles that have added the Ford accessory JBL® soundbar may experience difficulty in programming after installation. This may be due to the Ford Diagnosis and Repair System (FDRS) function not successfully programming this accessory to the vehicle's factory sound system. FDRS software has been updated to support a successful installation of the Ford accessory JBL® soundbar. Perform the FDRS programming function again using the installation instructions provided with the speaker on vehicles that meet this criteria.
