2016-2017 Focus RS Models are shipped with Front coil spring spacers that keep the suspension from bottoming out and to provide ramp clearance during shipping. The vehicle is shipped with a sticker on the windshield and Section 2 in the PDI service record directs the technician to remove the blocks prior to customer delivery. Failure to remove the spacers will result in a rougher than normal ride and will make noise while driving. Please share this SSM with your sales and PDI departments.
