Cause	Possible broken valve spring.

#### Correction:

During inspection if you determine that the engine has a broken valve spring it will be necessary to perform a cylinder leakage test on the affected cylinder. If no cylinder leakage is observed follow the replacement guidelines below and replace the necessary parts and evaluate vehicle to ensure no further concerns exist.

For 6.2L engines RPOs L87, LT1, LT4 and LT2 if vehicle has below 1000km replace all valve springs. For vehicles above 1000km just replace the 1 broken valve spring.

For all other engine RPOs L82, L84 and L8T just replace the affected valve spring.

If cylinder damage is found it will be necessary to inspect further to determine the extent of the engine damage to determine correct repair required.

Also inspect the intake manifold runner for the cylinder with the concern to ensure there is no damage. Reference [00-06-01-026M](#): Engine Replacement After Severe Internal Engine Damage -Replace Intake Manifold.

If parts are required, they can be order through the GM CCA parts process. Use the vehicle identification number (VIN), SI, and the GM Electronic Parts Catalog to determine the correct part to order.
