

2021MY Mustang Mach-E
(HPCM/BCCM/BECM/ABS/EVCM/SDCM))
2.7.2

Ford Power-Up 2.7.2

We heard what you had to say, and we took action. The brake pedal feel is now modified to allow for smoother braking.

On top of that, we've done some additional minor fine-tuning here and there to help ensure things are running smoothly. As a result of these actions, you may see a message in your screen behind the steering wheel, stating, "Reverse Brake Assist not available. See manual". This message is accurate but will clear in just a couple minutes into your drive, and the feature will then be available.

Ongoing updates like this help you enjoy the best possible version of your Mustang Mach-E® vehicle.

2.7.4

Ford Power-Up 2.7.4

A small adjustment so your vehicle can prepare for future updates. Ongoing updates like this help you enjoy the best possible version of your Mustang Mach-E™ vehicle. Your sweet ride just got a little sweeter.

Don't forget that our latest Update Now function lets you install an update as soon as it's ready for your vehicle.

And, you can also take advantage of our new Multi-Day Scheduling feature, which helps you manage updates that require your vehicle to be turned off for a short while. We know you're busy, so this feature lets you schedule and stagger your updates for the days and times that work best for you.

2.8.1

Ford Power-Up 2.8.1

Prepping your vehicle for the future

If your Mustang Mach-E™ is equipped with the Ford Co-Pilot360™ Active 2.0 Prep Package, this update will prepare it for Ford BlueCruise activation.

If you purchased the Mustang Mach-E Select but did not purchase the Comfort/Technology Package, then your vehicle does not have the hardware necessary to support BlueCruise. However, this update still starts to prep your vehicle to receive future upgrades.

Another download will arrive soon to complete the process. Because of their complexity, these updates take longer than usual.

As a result of these updates, you may see a message in your dashboard stating, “Reverse Brake Assist not available. See manual”. This message is accurate but will clear in just a couple of minutes into your drive, and the feature will then be available.

Note: You may have already received some of this functionality in a prior update, but this version has been fine-tuned and includes additional tweaks to other features.

Ongoing updates like this help you enjoy the best possible version of your vehicle.

2.8.2

Ford Power-Up 2.8.2

Ford BlueCruise delivery plus minor changes

If your Ford Mustang Mach-E™ is equipped with the Ford Co-Pilot360™ Active 2.0 Prep Package, your Ford BlueCruise hands-free highway driving feature has now been delivered. This completes what we call Product Improvement Program 21G01. There is nothing you need to do except enjoy the update.

Ford BlueCruise allows you to drive hands-free on prequalified sections of divided highways called Hands-Free Blue Zones. You'll know BlueCruise is active when your instrument lighting turns blue and the words "Hands-Free" appear with a steering wheel graphic. At that point, you can remove your hands from the steering wheel. Of course, you are still expected to keep your eyes on the road, and you'll be monitored by the driver-facing camera. Remember, your FordPass™ Connect modem must be connected for BlueCruise to work. See your Owner's Manual for details.

If you purchased the Mustang Mach-E Select but did not purchase the Comfort/Technology Package, then your vehicle does not have the hardware necessary to support BlueCruise. However, this update still prepares your vehicle for future upgrades.

Note: You may have already received some of this functionality in a prior update, but this version has been fine-tuned and includes additional tweaks to other features.

Ongoing updates like this help you enjoy the best possible version of your vehicle.
