Ford Power-Up

Activate horn, lights from your phone

Note that you may have received some of this functionality in a previous version, but this update has been enhanced.

You could always locate your parked Mustang Mach-E™ by using your key fob to sound the horn and flash the lights. But now, you can do this using your FordPass™ App in your smartphone. And because it's a cellular connection, there's virtually no limit to its range like there is with your key fob (and the Phone As A Key Horn and Lights feature).

A friendly reminder that the Update Now feature lets you install a Ford Power-Up software update the moment it's ready. Plus, our new Multi-Day Scheduling feature helps you manage software updates that require your vehicle to be turned off during the update. You simply pick the days and times that work best for you (like overnight). It's easy-peasy.

Ongoing updates like this help you enjoy the best possible version of your Mustang Mach-E™ vehicle. Keep in mind that feature availability varies by model. For more information on these features, visit [Ford.com/support](https://ford.com/support) or your digital Owner's Manual.

Ford Power-Up

Ford BlueCruise delivery plus minor changes

If your Ford Mustang Mach-E™ is equipped with the Ford Co-Pilot360™ Active 2.0 Prep Package, your Ford BlueCruise hands-free highway driving feature has now been delivered. This completes what we call Product Improvement Program 21G01. There is nothing you need to do except enjoy the update.

Ford BlueCruise allows you to drive hands-free on prequalified sections of divided highways called Hands-Free Blue Zones. You'll know BlueCruise is active when your instrument lighting turns blue and the words "Hands-Free" appear with a steering wheel graphic. At that point, you can remove your hands from the steering wheel. Of course, you are still expected to keep your eyes on the road, and you'll be monitored by the driver-facing camera. Remember, your FordPass™ Connect modem must be connected for BlueCruise to work. See your Owner's Manual for details.

If you purchased the Mustang Mach-E Select but did not purchase the Comfort/Technology Package, then your vehicle does not have the hardware necessary to support BlueCruise. However, this update still prepares your vehicle for future upgrades.

Note: You may have already received some of this functionality in a prior update, but this version has been fine-tuned and includes additional tweaks to other features.

Ongoing updates like this help you enjoy the best possible version of your vehicle.
